

CVSHealth.
**Drug Trend
 Report 2017**

By the Numbers

In 2017, despite AWP inflation ~10% our strategies kept **drug price growth nearly flat at 0.2%**

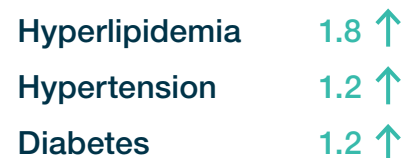

We helped make prescriptions **more affordable for members**

3 of 4 members spent **<\$100** for their prescriptions

By keeping drugs affordable, we also helped **more members stay on therapy** in key categories*

In 2018 we are doing even more to help patients save money.

- Increasing price transparency at all points of care
- Giving members greater access to more affordable options

AWP (Average wholesale price), PMPM (Per member per month). *Percentage point increase in number of optimally adherent members.

All of the savings and/or trend results discussed in this report will vary for specific populations based on a variety of factors, including demographics, plan design and programs adopted by the client. Client-specific modeling available upon request.
