

Home Infusion Care, Better for Patients and Payors

A new study¹ from the CVS Health Research Institute shows that

Compared to infusions in hospitals or other medical settings, home infusions result in

Up to **\$3,000** savings per course of treatment

Home Infusion Patients

- ✓ Had better clinical outcomes and fewer complications
- ✓ Reported better physical and mental well-being
- ✓ Experienced less disruption in family and personal responsibilities

This new study shows that when infusion nurses and pharmacists - such as Coram's* skilled clinicians - administer infused medications at home, patients do better and payors spend less.

*Coram, a service provided by CVS Health, provides vital infusion care and support to tens of thousands of Americans each month with a range of conditions including immune deficiencies, rheumatoid arthritis and serious infections requiring intravenous antibiotic therapy. Care is administered by experienced infusion nurses and pharmacists, and in addition, patients receive additional disease management education and support throughout their treatment.
